## Re: NET METERING CHANGES

On June 7, 2018, the Kaysville City Council approved a change to the existing net metering agreement. This change is to discourage the over building of a solar system. The resident with solar (GF) will not be allowed to produce more kWhs than they consume in a year.

Per the current net metering agreement between yourself and Kaysville City, please consider this letter your official notification of this change. This change will take effect on August 1, 2018. The red text version below shows the actual changes to the agreement. If there are questions about this change, please contact Bruce at the Kaysville Power Department at (801) 546-1235 or [brigby@kaysvillecity.com](mailto:brigby@kaysvillecity.com).

Thank you.

*Kaysville City Power*

- e. The City will only compensate a “GF” (Generating Facility) customer up to but not to exceed the amount that it consumes in kWh’s during the calendar year. If the customer generates more kWh’s than they consume through the calendar year, that excess will be forfeited. At the end of the year the City will review the customer’s account and a billing adjustment will be made for any over payment the customer received during the previous year. The adjustment will be prorated over the next 6 months.
